

FLYING HORSE COUNTRY CLUB

Mobile Modular created a temporary golf clubhouse for Flying Horse Country Club so club members had a transitional space during the construction.

THE CHALLENGE

Flying Horse Golf Club recently opened a new golf course location and needed a temporary clubhouse while they planned to construct a commercial modular facility.

The modular building would take approximately 2-3 years to complete so Flying Horse needed transitional space for their members while the new facility was under construction.

Customer Name: Flying Horse Country Club

Project Location: Colorado Springs, CO

Building Type(s): Modular Retail

Module Count: 3

Total Sq. Ft.: 2,160 sq. ft.

THE SOLUTION

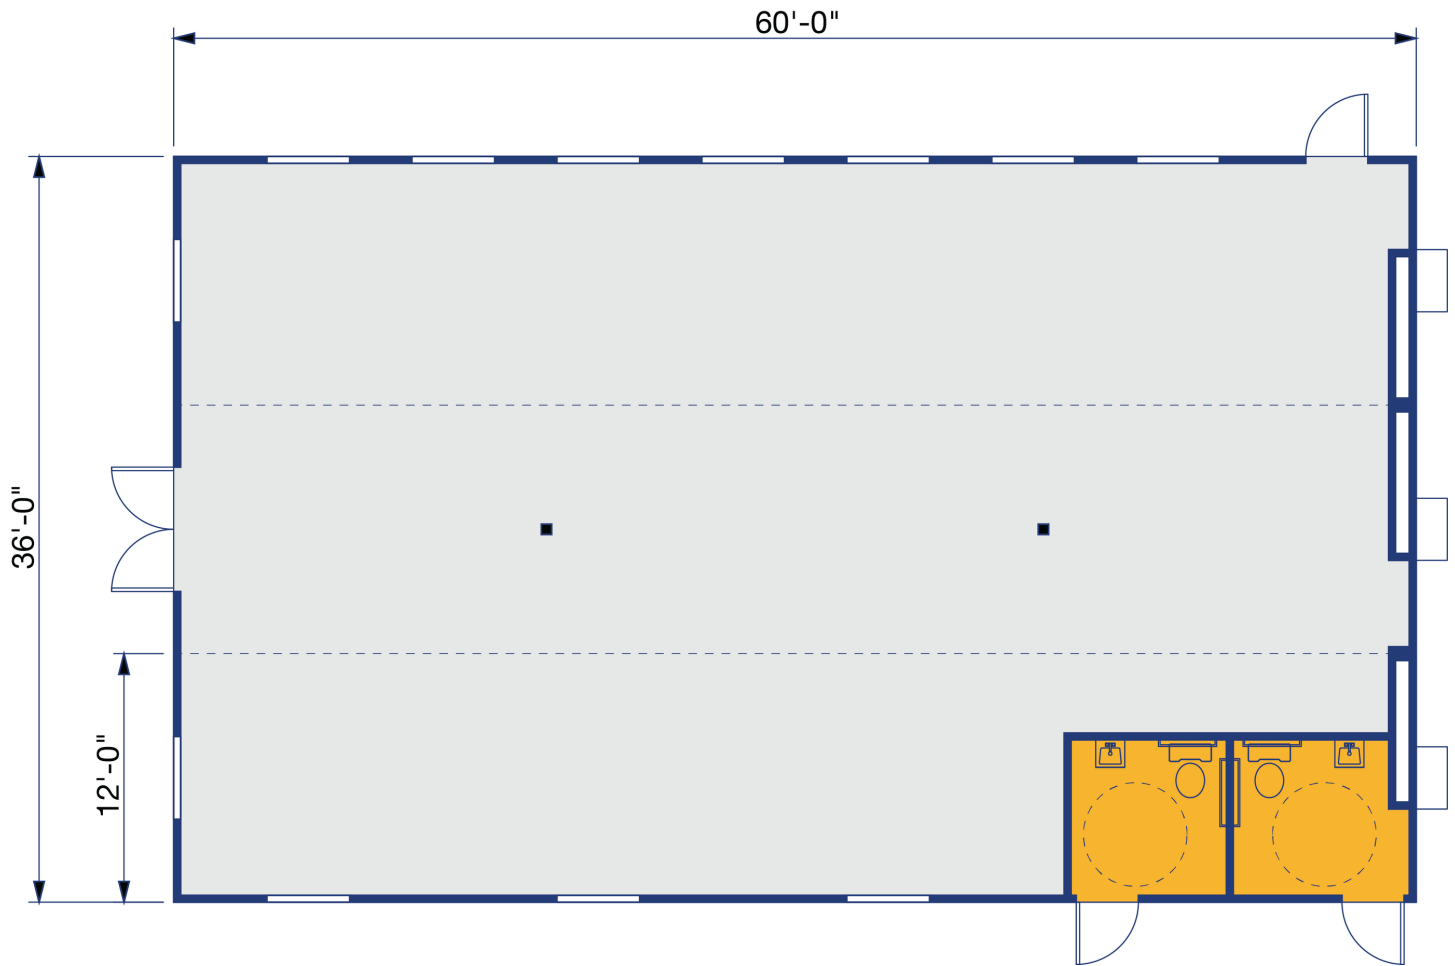

Mobile Modular was able to provide our client with 3 modular units that could be installed to fit their time constraints and budget. The 2160 sq. ft. building includes an open retail space with restrooms and outdoor patio seating. Just in time for the golf season, the project took 90 days, completed over the late winter months.
