

# MODULAR OFFICE FOR SERMC FACILITY

The Navy needed office space for their Naval Station in Mayport, Fla. Mobile Modular designed and built four, two-story offices

## THE CHALLENGE

We were approached by the Naval Station in Mayport, Fla., to build out a 3-phase design-build construction project. The project increased office space in order to accommodate an influx of necessary staff hired to support their littoral combat ships. The Southeast Regional Maintenance Center (SERMC) requested the use of modular office buildings for this influx. So, the experienced Mobile Modular crews assisted with the time-sensitive nature of the project.

## SCOPE OF WORK

One of the major benefits of being a design-build modular construction company is that we streamline the multiple components of a project in-house. Each department of the Modular Mobile team moved swiftly to line up the logistics of engineering the buildings, building. We installed the necessary foundations and transported and installed the modular buildings to the site. Modular Mobile then finished the project with sprinkler systems, the foundation deck tower, and all facility steps and ramps.
