

VERITAS MEDICAL SOLUTIONS

Mobile Modular provided Veritas Medical Solutions with multiple modular buildings to help house sensitive mechanical equipment.

THE CHALLENGE

Veritas Medical Solutions contacted our team to provide modular buildings to supplement their Linear Accelerator used to treat small animals at ISU, a major Midwestern Research University. Veritas had a design-build contract to add the vault, constructed using their innovative approach to house the LINAC equipment, and needed a partner to provide the support buildings. The vault needed to be constructed before any support sections could be added with a concern about the tight space available to site-build.

Customer Name: Veritas Medical Solutions

Project Location: Ames, IA

Building Type(s): Modular Healthcare

Module Count: 2

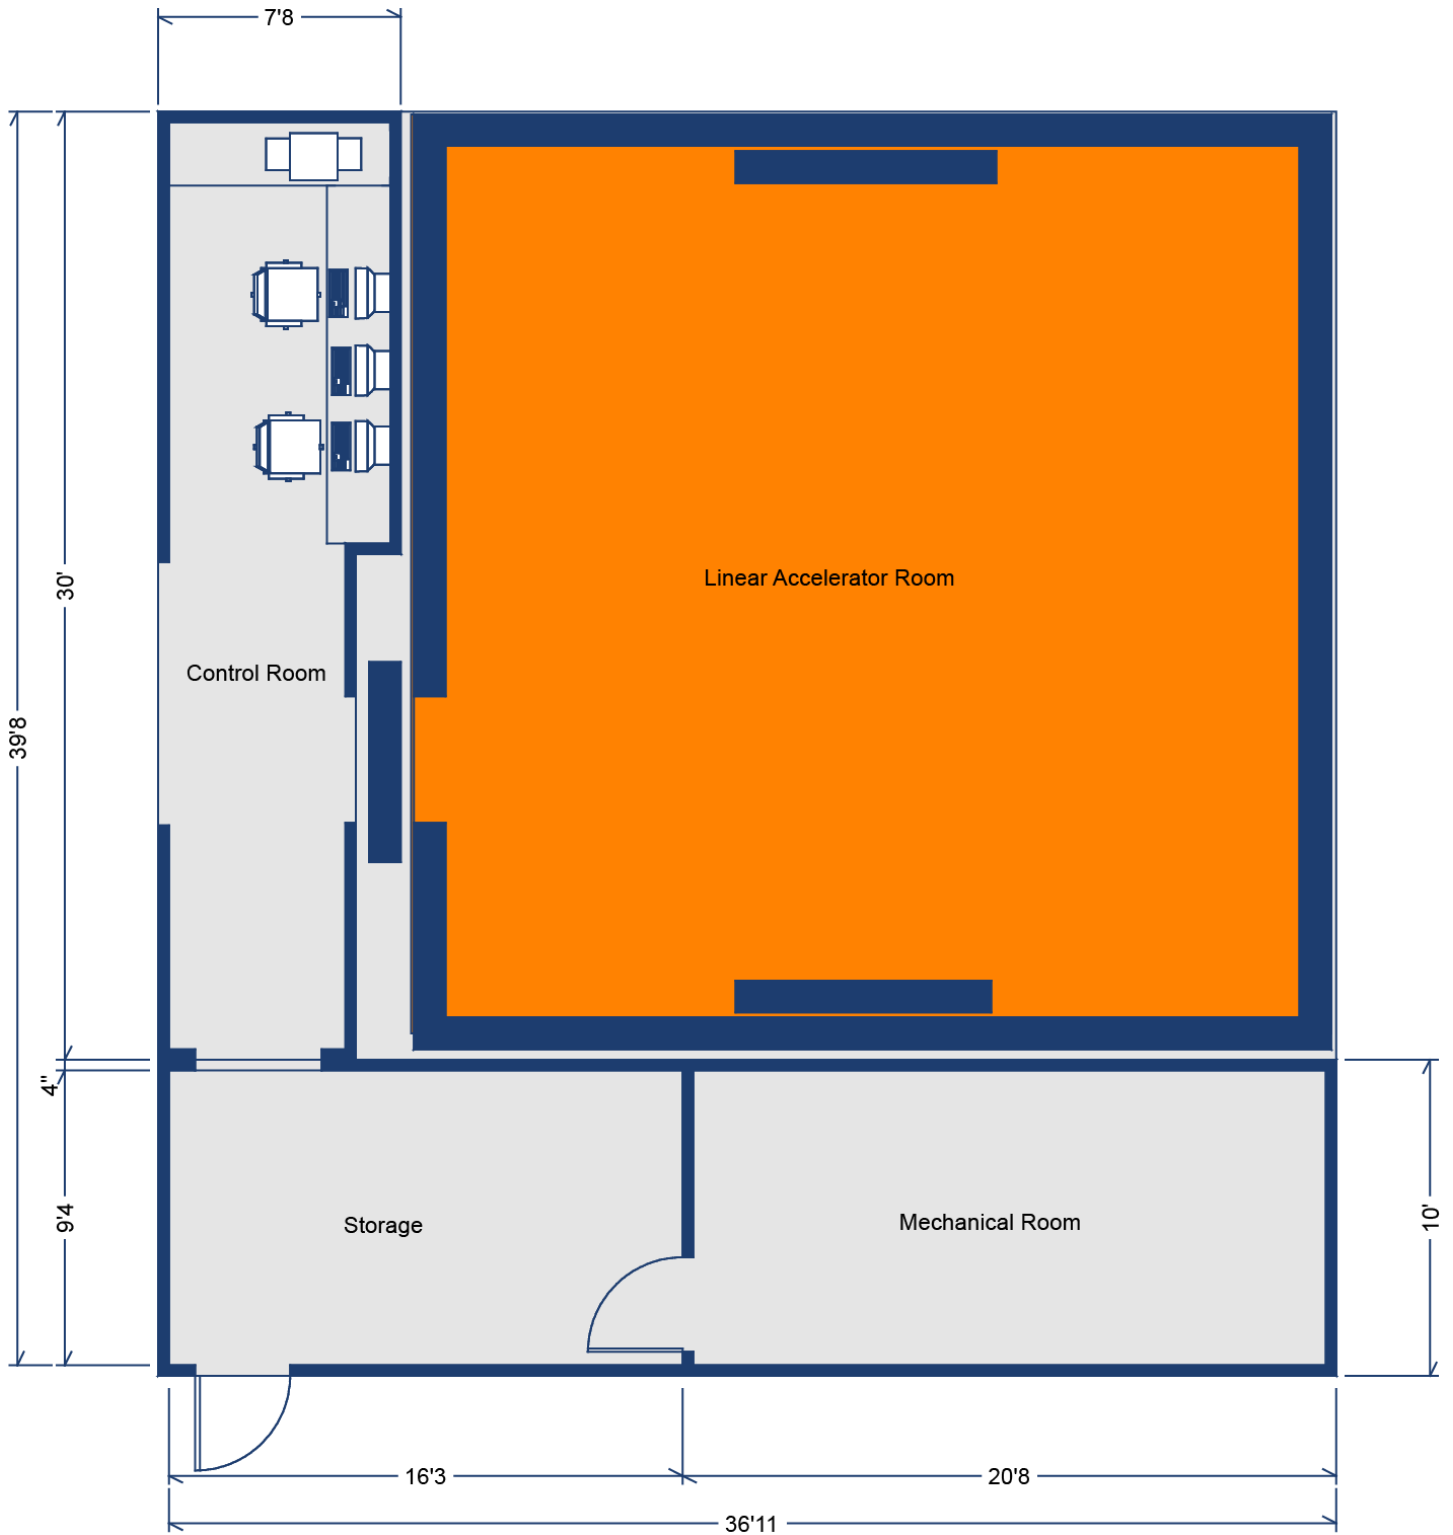

Total Sq. Ft: 580 sq. ft.

THE SOLUTION

Mobile Modular provided 2 modules to fit the need; Module 1 has a dual purpose- to house the Control Room for the LINAC and include computer equipment/monitors. It is also the connector to the existing facility and had to be installed after the vault was constructed and was set into position with only inches to spare. Module 2 houses mechanical equipment and provides additional storage. Both modules and the LINAC building were sheathed on-site and blended seamlessly into the existing building.
