

JBSA-FORT SAM HOUSTON

Mobile Modular provided two new modular administrative buildings for Fort Sam Houston, a U.S. Army post in San Antonio, Texas.

THE CHALLENGE

The United States Army Corps of Engineers requested a bid for the repair of building 2263 at JBSA-Fort Sam Houston. As part of the bid our team was selected to provide and lease the modular swing space for the project. A Mobile Modular client with a stellar safety record and documented safety protocol was looking to provide their plant staff with a more modern shower/locker room environment and break area. Additionally, they had a need for a small amount of office space and a secure file room. This client had a very tight timeline and stringent budget for this project that would provide approximately 5300 square feet of additional space to their existing facility.

THE SOLUTION

We provided and installed two new 23,000 sf administration buildings for a total of 46,000 sf. Our team was responsible for all work associated with the modular buildings to include the fire alarm and fire sprinklers.

Customer Name: San Antonio-Fort Sam Houston

Project Location: San Antonio, TX

Building Type(s): Modular Office

Module Count: Lease

Total Sq. Ft.: 46,000 sq. ft.
