

Mobile Modular: Equipping the United States Navy with dependable modular space.

PROJECT PROFILE

Building 2006, Marine Corp Base
Quantico, VA

Days to Complete: 50

Building Use: Offices and Restrooms

Square Footage: 32,256

MOBILE MODULAR

Our mission is to provide each customer with a building designed to meet their specific needs and a level of individual service that laps our closest competitor. We believe we are the most knowledgeable, resourceful and capable company in the industry today.

Challenge

Quantico, VA - At the Quantico Marine Base in Virginia, the United States Navy is currently engaged in a major \$9.9 million renovation of Building 2006, an office building that currently houses administration for the Headquarters and Services Battalion of the U.S. Marine Corps. The Navy anticipated the need to relocate Building 2006 staff to modular office space for a year while Forrester Construction, the general contractor, completed the renovation.

In their specification, the Navy required modular buildings and portable restrooms featuring ADA-accessible ramps and decking to be built to demanding military-grade standards for design and construction.

Solution

Working closely with the general contractor to meet the exacting U.S. Navy building requirements, the Mobile Modular Mid-Atlantic team designed and fabricated modular office space suitable for Building 2006 administrative staff during the renovation. Challenges included limited available space, inclined terrain for construction and the need to efficiently house 300 U.S. Marines while the three story, 1940-era building renovations were completed.

“The [Mobile Modular] HVAC systems have proven to be some of the most reliable and effective aboard the base, which is crucial during the summer months in Quantico.”

Captain Djerf of the United States Marine Corp

To minimize disruption to Marine Corps staff, the Mobile Modular team opted to use a combination of different modular buildings deployed in three strategic locations surrounding the Building 2006 renovation site. The new Marine Corps modular buildings included twenty-one (21) 24' x 56' general modular office buildings and two (2) 12' x 56' restroom buildings. Each office and restroom building was fitted with reusable galvanized aluminum decking and ramping to meet ADA compliance requirements.

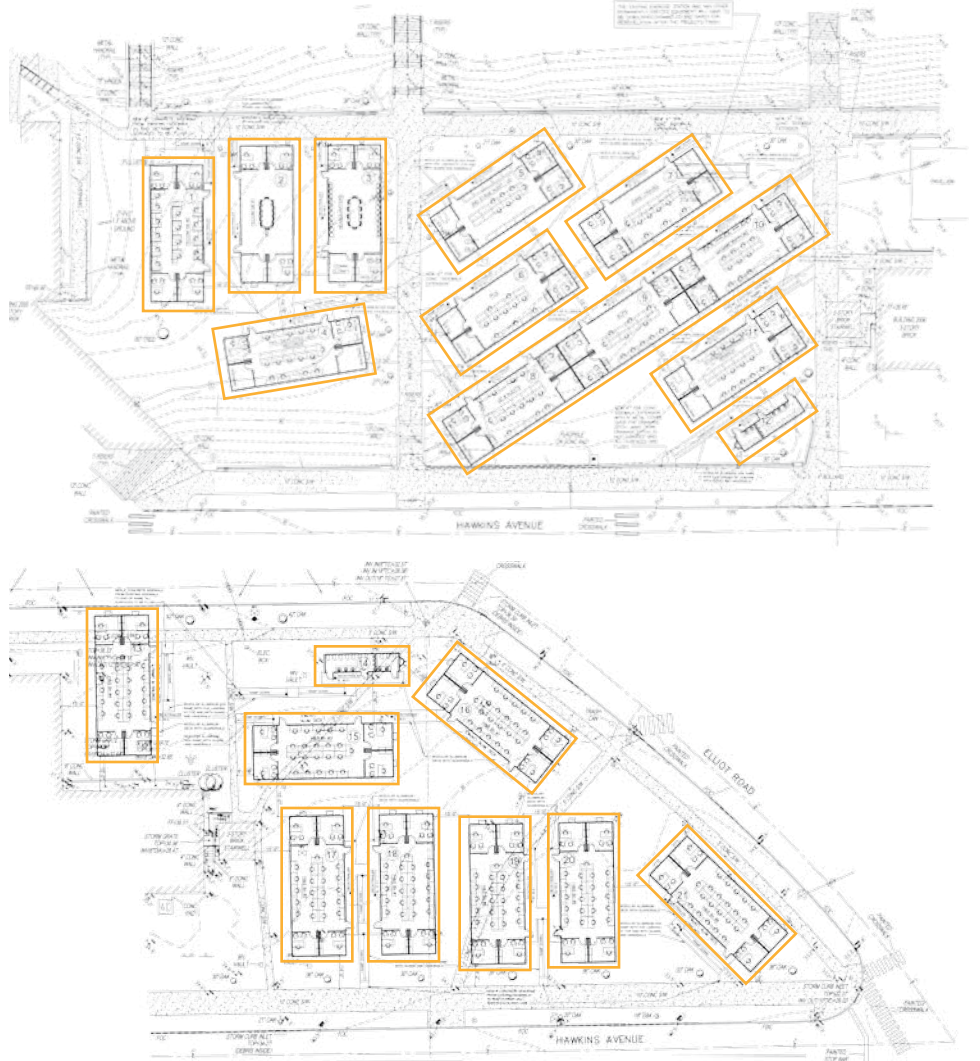

YOUR PROJECT – OUR COMMITMENT

Mobile Modular delivers the most adaptable modular building systems that keep today's most challenging commercial projects on time and on budget.

Captain Djerf of the United States Marine Corps offered, "When problems arise, Forrester and Mobile Modular have been quite responsive in correcting them. The HVAC systems have proven to be some of the most reliable and effective aboard the base, which is crucial during the summer months in Quantico. Additionally, the lavatory trailers are spacious and easy to keep clean. All told, these structures are serving their purpose quite well."

The project design added 32,256 sq. ft. using twenty-one (21) 24' x 56' modular office buildings housing approximately 300 Marines along with two (2) 12' x 56' restroom units.

The entire building project, covering nearly 33,000 square feet, was successfully completed in just seven weeks despite facing one of the worst winters in ten years. Despite tough challenges from Mother Nature, Mobile Modular successfully completed the Building 2006 project to the satisfaction of Forrester Construction, the U.S. Navy and the U.S. Marine Corps in record time.
